PROFESSIONAL EXPERIENCE

QA Programmer, Ubisoft Montreal ☑ 07/2024 – present | Montreal, QC

- Extended the studio's declarative test framework (DTest) with reusable Gherkin-style statements — inventory contents, HUD state, map/location discovery, equipped-tool state — letting QA and design authors write system-level gameplay regression tests without writing C++; designed as parameterized primitives shared across two AAA titles.
- Designed and maintained C++ automated test suites covering critical gameplay systems (3C, AI, UI, Combat), and integrated them into the package approval pipeline, cutting official build validation time by 3 hours per cycle.
- Instrumented 20+ gameplay telemetry attributes (combat outcomes, ability resource costs, status effects, tool usage, threat state) feeding the studio's analytics pipeline; promoted one per-project system into the shared engine framework so every title on the engine inherits it.
- Drive Claude Code agents daily across a multi-million-line C++ monorepo, authoring project skills, MCP integrations, and custom agents that encode engine conventions — including a tool that scripts scene setup and validation against a live engine instance over MCP, and an automated release-notes generator that pulls build diffs from an internal service and publishes curated HTML reports.
- Prototyped an LLM-based unit test generation framework with the R&D team, designing the evaluation sandboxes and validation logic that decide whether a generated test is trustworthy; built and maintained C++ ImGui debug tooling that accelerated iteration for gameplay and design teams.

Gameplay Programmer Intern, Beenox, Activision ☑ 01/2024 – 04/2024 | Montreal, QC

- Developed and Engaged in the World Wide Launch of **Call of Duty Warzone Mobile** ☑
- Improved gameplay experience related to **Player 3C, Core Movement, Weapon, Vehicle mechanics**, and **UI** using **C++**, **Lua**, and in-house scripting tools.
- Addressed and fixed more than 15 issues that affect a total of 30M+ active players.

Gameplay Programmer Intern, Motive Studio, Electronic Arts ☑ 01/2022 – 08/2022 | Montreal, QC

- Prototyped and Engaged in the development of the upcoming **Iron Man game** ☑.
- Prototyped gameplay experience related to **Character status**, and **Combat resources** with **Gameplay Ability System** in **Unreal Engine 5**, **C++**, and **Blueprint**.
- Built gameplay features related to **Hit Detection**, and **Skill resources** with **Entity Component System** in **Frostbite Engine**, **C++**, and **Schematics 2**.
- Finished more than 20 gameplay tasks, and helped the prototype pass over 10 Sprints, internal goals.

SKILLS

C++, C#, Python, Lua, Go, Unreal Engine 5, Anvil Engine, Unity, Frostbite Engine, SQL, Automated test, ImGui debugging tools, Perforce

EDUCATION

Bachelor of Computer Science, Concordia University

09/2019 – 05/2023 | Montreal, QC
